Success in any sport is based on constant practice and developing your muscle memory through repetition, repetition, repetition!

The Pistolero PistoLaser Practice & Training System provides pistol shooters the ability to develop their muscle memory by practicing with their own gun, in their own home (or anywhere).

The Pistolero System fills the needs of all pistol shooters –

1. The Target Shooter
2. The Instinct Shooter
3. The Tactical Shooter

Both the Tactical and Instinct shooter can develop their skills by firing from a variety of positions and always seeing the laser-aimed shot impact point. This is the perfect way to train police recruits or military shooters in the skills required to react quickly and accurately during times of high stress and may mean the difference between life and death.

For the Target shooter, installing the appropriate caliber spud into the gun's muzzle allows you to practice strength training and repetitions, aiming at various targets while observing the results of your shot.

With the Pistolero PistoLaser you can shoot at a target with your own gun repeatedly and get the results of your aimed shot indicated instantly. You can practice at home on your own time, without the expense of bullets or going to the range.

The PistoLaser comes in five (5) color-coded caliber spuds in 22, 9mm/357, 40, 44, and 45 calibers so you can use it with any pistol or revolver. It is easy to use and will not harm the finest gun or muzzle.

The Pistolero PistoLaser is affordably priced at \$250 for the complete set of calibers.

The Pistolero PistoLaser is Patent Pending.

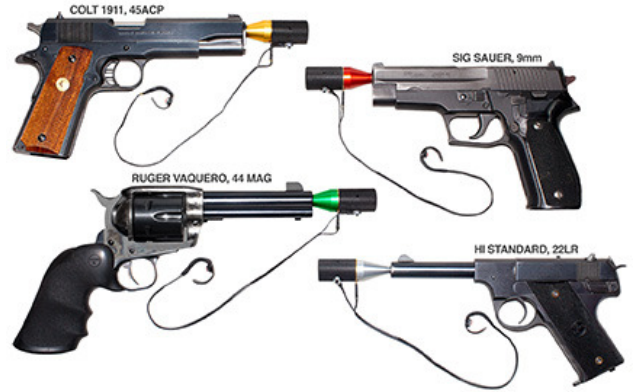

8" x 7" Durable Plastic Case holds 5 caliber inserts, two trigger switches, batteries and adjustment wrench.

Kit includes 5 caliber inserts – 22 (Silver), 9mm/357 (Red), 40 (Blue), 44 (Green), 45 (Gold)

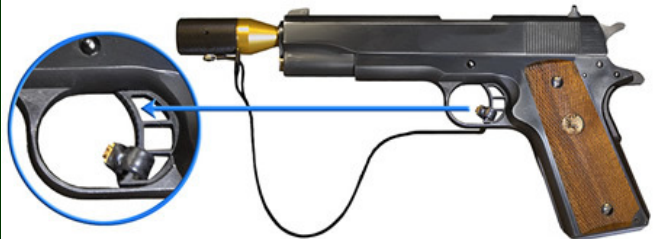

Trigger Switch Operation

The Trigger Switch is attached to the finger ring which can be used by simply slipping your trigger finger into the finger ring or by attaching the finger ring directly to the trigger.

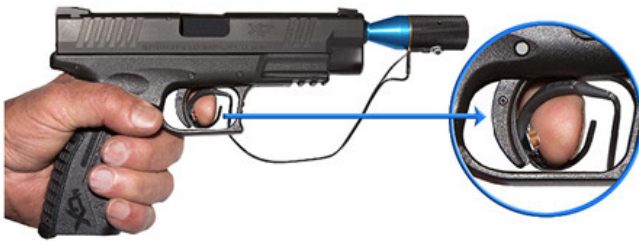

Trigger Switch Mounted on the Finger Ring

Trigger Switch Mounted on the Trigger

Colt 1911 - 45ACP

Springfield Armory Match XDM-40SW

Ruger SP101 - 357 Mag

Pistolero Instructions

First Thing:

Remove magazine. Unload pistol. Unload cylinder (revolver). Remove all live ammo from the practice area.

Setting up the PistoLaser

1. Screw the appropriate caliber insert into the Nose Cone. The five inserts are 45, 44, 40, 357/9mm, 22.
2. Place the insert end into the muzzle of the gun. The insert will enter the barrel without harming it since the construction is all aluminum with brass bead contact balls. Set the PistoLaser firmly against the gun muzzle.
3. Adjust the finger ring to fit your trigger finger and place it so you can comfortably touch your ring-mounted finger to the gun trigger. Touching the ring to the trigger and squeezing will close the microswitch on the ring and fire the laser.

Sighting in the PistoLaser for your gun:

There are four 4-40 size adjustment screws; the screws use a .050" Allen wrench.

1. To move the laser dot "up" on the target, loosen the bottom screw – 1/20th turn increments – and tighten the top screw in very small increments.
2. To move the laser dot "left" on the target, loosen the right screw – 1/20th turn increments – and tighten the left screw in very small increments.

Do not overtighten the spud to the nose cone – hand tightening is fine.

CAUTION: ALWAYS REMOVE THE PISTOLASER BEFORE SHOOTING THE GUN!!

Battery Installation:

When installing the three (3) LR-44 batteries into the PistoLaser, the smaller section of the batteries faces the Nose Cone; the larger section faces the PistoLaser spud.

Price: \$250.00
